Alok Sharma

Senior Software Engineer 2

+91 9711475789 · aloks1701@gmail.com · linkedin.com/in/aloks1701 · friendwhocodes.com · Remote · India

SUMMARY

Senior Software Engineer 2 with **10+ years** building distributed systems and observability platforms at Confluent, Sumo Logic and Atlan. Recently shipped AI-driven SRE automation that cut P90 incident mitigation from **3+ hours to under 15 minutes** and delivered **$300K+ in annual savings** across a 650-tenant Kubernetes fleet. Looking for a Staff-level IC role at a remote-first company.

SKILLS

Languages	**Current:** Python, Java · **Earlier:** Go, Scala, C++
Cloud & Infra	AWS, Kubernetes, Docker, Terraform; multi-cloud (Azure, GCP)
Observability	Datadog, Prometheus, Grafana, VictoriaMetrics, ClickHouse, ELK Stack
Data & Messaging	Kafka, Redis, ksqlDB, PostgreSQL, MongoDB, DynamoDB
AI / ML	LLM integration, autonomous agents, prompt engineering, RAG
Core	Distributed Systems, System Design, Microservices, API Design

EXPERIENCE

Atlan

Remote · Mar 2025 – Present

Senior Software Engineer 2 · Platform Engineering

- Built an **AI SRE agent** (Anthropic SDK, **40+ skills** and **15+ data-source integrations**) that dynamically selects skills at runtime for autonomous detection, investigation and remediation — cut investigation time from **30+ min to 2 min (15×)**, remediation of top-10 use cases from **40 min to 5 min (8×)** and P90 incident mitigation from **3+ hrs to under 15 min**; **95% autonomous resolution**.
- Raised observability platform reliability from **85% to 99.9%** by hardening VictoriaMetrics and ClickHouse across a fleet of **150 host clusters** running **650 vcluster tenants** and **50 dedicated clusters**.
- Saved **$300K+ / year** via VictoriaMetrics scaling, high-cardinality time-series fixes and ClickHouse optimizations; cut weekly alert volume from **2,200 to under 300** in one month.
- Closed out a long-stalled **vCluster observability** project, unblocking platform-team infrastructure upgrades; led migration from Zenduty to Incident.io and set up the team's on-call rotation, maintenance windows and SLA tracking.

Confluent

Remote · Nov 2022 – Aug 2024

Senior Software Engineer · Observability (Logging) & ESKU

- Reduced new logging environment provisioning from **3 months to 2 weeks (6×)**, enabling BCP/DR, regionalization and prod / non-prod separation for enterprise rollout.
- Built **Logwatcher**, a sensitive-data scanner for logs, which unblocked **FedRAMP GA** for Confluent Cloud.
- Led the team-wide migration to **HashiCorp Vault**, replacing static secrets with dynamically-rotated ones across all services.
- Onboarded **30+ services** to the logging pipeline with selective automation and a Slack-bot self-service flow; contributed to the GA of Confluent Cloud Enterprise (ESKU).

EXPERIENCE (CONTINUED)

Sumo Logic
Noida, India · Aug 2017 – Oct 2022

Senior Software Engineer · Observability / Metrics / Log Search

- Built customer-facing **Alert Response Page**, new **Metrics Dashboard** and **Search Template** in Java / Python / Scala — all showcased at the annual *Illuminate* conference.
- Resolved an **8-year-old DST bug**, cutting related downtime and customer tickets by **95%**; led a company-wide initiative that reduced DST bugs across the product by 90%.
- Shipped core backend: Metrics Query Rate Limiter, Saved Metrics Search APIs, Data Forwarding system and the Python end-to-end test framework adopted across the org.

Wiser Solutions
Noida, India · Apr 2016 – Jul 2017

Software Engineer · Data Platform (formerly Quad Analytix)

- Built the core metadata extractor and crawler for the pricing-intelligence platform; added SKU extractors that boosted the team's data-extraction efficiency.
- Built data monitoring with Tableau and storage pipelines on MongoDB and Amazon Redshift.

IIRS · ISRO
Dehradun, India · May – Jul 2014

Summer Research Intern · GIS Department, Indian Institute of Remote Sensing

- Studied environmental factors affecting cancer incidence in India using Python, R and QGIS; presented findings at the Annual Convention of the Indian Society of Remote Sensing.

PROFESSIONAL PROJECTS

AI SRE Agent — *Atlan · 2025*

Autonomous incident detection, investigation and remediation built on the Anthropic SDK — 40+ skills and 15+ data-source integrations with dynamic runtime skill selection. Runs across 150 host clusters and 650 vcluster tenants at 95% autonomous resolution; adopted by multiple teams for their own reliability use cases.

Konton — *Sumo Logic · 2019*

Chaos-testing framework for fault-injection and resilience testing of production services — won the company Hackathon Judge's Choice Award.

PERSONAL PROJECTS

GoalSetter — *Next.js · TypeScript*

AI-powered goal-tracking and productivity web app — designed, built and deployed end-to-end.

AstroFacts — *Android · Google Play*

Published Android app serving a curated collection of facts about the Universe.

EDUCATION

B.Tech, Computer Science & Engineering
Noida, India · 2011 – 2015

ASET, Amity University

AWARDS, CERTIFICATIONS & PAPERS

Hackathon Judge's Choice Award
Sumo Logic, 2019 · for *Konton*, a chaos-testing framework

Research Paper Presentation
Annual Convention, Indian Society of Remote Sensing · IIRS / ISRO

Data Structures & Algorithms
Certification · IIT Madras (NPTEL)
